## SUMMARY

Aspiring AI/ML engineer with a strong foundation in computer vision, deep learning, and applied machine learning. Skilled in problem-solving and end-to-end system development — from dataset curation through model training and deployment — with a passion for building real-world AI solutions.

## EDUCATION

|                                                                                                                                       |                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|

## TECHNICAL SKILLS

**Programming Languages:** Python, MATLAB, Java

**Machine Learning & AI:** Image Processing & Computer Vision, Natural Language Processing (NLP), Generative AI, Predictive Modeling, ANN / Deep Learning

**Engineering & Systems:** DBMS, AR/VR Development, Electronic Circuit Design, 3D Modeling & Prototyping, Sound Engineering

## PROJECTS

### Groundwater Level Prediction System

*Flask, Scikit-learn, XGBoost, Chart.js | GitHub*

- Built a full-stack machine learning web application predicting groundwater levels using real-world hydrological data.
- Trained and compared multiple regression models, including XGBoost, to improve prediction accuracy.
- Designed interactive Chart.js dashboards to visualize prediction trends and model performance.

### Diabetes Detection Model

*Python, Machine Learning | GitHub*

- Built a diagnostic web interface paired with a machine learning model to predict diabetes risk and symptoms using the PIMA dataset.

### Deconstruction GPT — Urban Mine AI

*Python, AI / NLP | GitHub*

- Designed an interactive AI-driven system to identify reusable material recovery from e-waste, built under time constraints at the GenX Hackathon.

## ACHIEVEMENTS & RESPONSIBILITIES

- NPTEL Certification in Cyber Security and Its Applications.
- Presented a research paper, "Arrhythmia Detection Using ECG Signals," at the IPCV project seminar (MATLAB).
- Competed in 2 hackathons — GenX and CarVerse (in partnership with IEEE) — building rapid AI prototypes under time constraints.
- Participated in a National-Level Cybersecurity Hackathon.
- Received an Open Day Appreciation Certificate for a Machine Learning project.
